cover

Highlights

- Develop babies' attention and eye contact
- Develop babies' communication skills interacting with parents
- 4 books in each box set

At first, babies' vision skills are limited and will progressively improve as they will grow. At the age of 3 months, they will be responsive to contrasting images. Then, step by step, they will distinguish colors until they are fully able to visualize pictures and objects.

Hi, Baby! will accompany your child's development for months and months and will allow you to share intimate and communicative moments with your loved one.
